

WS 7B.1 - Graphing with Slope and y-Intercept

Put each equation into slope-intercept form, then graph.

1. $3y = 6x$

2. $5x + 2y + 10 = 0$

3. $2y - 3x = 2$

4. $\frac{y}{2} - \frac{x}{3} = \frac{1}{4}$

5. $x + 4 = y - 1$

6. $3x + 5y = 15$
