

PRINCIPLES - LESSON 8C

EQUATIONS, GRAPHS, & TABLES

ex1) Create a table and a graph from this equation in slope-intercept form.

x	y
-8	7
-4	6
0	5
4	4
8	3

$$m = -\frac{1}{4}$$

$$b = 5$$

slope-intercept
equation:

$$y = -\frac{1}{4}x + 5$$

$$y = mx + b$$

CONVERTING BETWEEN EQUATIONS, GRAPHS, & TABLES

ex2) Create a table and an equation in point-slope form from the graph.

	x	y	
(+1)	-1	-7	(+5)
(+1)	0	-2	(+5)
(+1)	1	3	(+5)
(+1)	2	8	(+5)
	3	13	

$$m = \frac{5}{1}$$

← rise (increase y by 5)
← run (increase x by 1)

point-slope
equation:

$$y - y_1 = m(x - x_1)$$

$$y - 3 = 5(x - 1)$$

$$m = 5$$

I'll choose point (1, 3).

If you choose a different point, you'll get a different point-slope equation.

CONVERTING BETWEEN EQUATIONS, GRAPHS, & TABLES

ex3) Create a graph and an equation in standard form from the table.

x	y
3	4
-6	1
6	5
-3	2
9	6

standard form equation:

First write the equation in slope-intercept form.

$$m = \frac{1}{3} \quad b = 3$$

$$y = mx + b$$

$$y = \frac{1}{3}x + 3$$

Convert to Standard form

$$y = \frac{1}{3}x + 3$$

The Standard Form

$$Ax + By = C$$

1. No fractions allowed.
2. x and y terms must be alone on the left side of the equation.
3. x term must be first and positive.

$$3y = x + 9$$

$$-x \quad -x$$

$$-x + 3y = 9$$

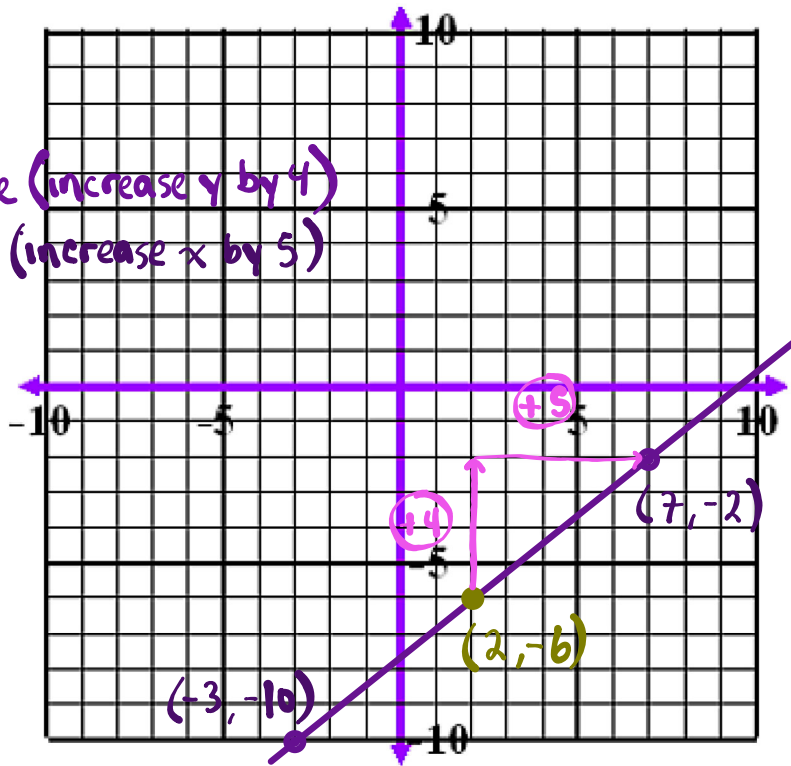

$$x - 3y = -9$$

CONVERTING BETWEEN EQUATIONS, GRAPHS, & TABLES

ex4) Create a table and a graph from this equation in point-slope form.

	x	y	
⊕5	-3	-10	⊕4
⊕5	2	-6	⊕4
⊕5	7	-2	⊕4
⊕5	12	2	⊕4
	17	6	

$m = \frac{4}{5}$ ← rise (increase y by 4)
 ← run (increase x by 5)

$y - y_1 = m(x - x_1)$

point-slope equation:

$y + 6 = \frac{4}{5}(x - 2)$

↑
opposite of y_1

↑
 m

↑
opposite of x_1

point $(2, -6)$
 x_1 y_1
